Publication No. US20030040525A1

GENERAL INFORMATION:
APPLICANT: KERWIN, SEAN M.
APPLICANT: KERWIN, SEAN M.
APPLICANT: FIGNER, MIGUEL
APPLICANT: HURLEY, LAURENCE H.
TITLE OF INVENTION: INHIBITION OF HUMAN TELOMERASE BY A
TITLE OF INVENTION: G-QUADRUPLEX-INTERACTION COMPOUND
FILE REFERENCE: UTS8:6799USD2
CURRENT APPLICATION NUMBER: 09/09/940,173A
CURRENT APPLICATION NUMBER: 09/244,675
PRIOR APPLICATION NUMBER: 09/244,675
PRIOR APPLICATION NUMBER: 09/244,675
PRIOR FILING DATE: 1998-04-02

PRIOR FILING DATE: 1998-04-02

NUMBER OF SEQ ID NOS: 12

GENERAL INFORMATION:
APPLICANT: Kool, Eric T.
TITLE OF INVENTION: Telomere-Encoding Synthetic DNA Nanocircles, and their use for TITLE OF INVENTION: Teleomere Repeats
TITLE OF INVENTION: the Blongation of Telomere Repeats
FILE REFERENCE: 12665.0021.NPUS01
CURRENT APPLICATION NUMBER: US/10/336,265
CURRENT FILING DATE: 2003-01-03

Sequence 7, Application US/09042460

Patent No. 676719

GENERAL INFORMATION:
APPLICANT: Morin, Gregg B.
APPLICANT: Depinho, Ronald
APPLICANT: Oreprinho, Ronald
APPLICANT: Greenberg, Roger
TITLE OF INVENTION: Mouse Telomerase Reverse Transcriptase
NUMBER OF SEQUENCES: 101
CORRESPONDENCES: 101
CORRESPONDENCES: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Bighth Floor
CITY: San Prancisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDIUM TYPE: RIPOPKMISH

Patent No. 6017709

GENERAL INFORMATION:
APPLICANT: WING, Jun
APPLICANT: VING, Jun
APPLICANT: VING, Lealle Burgan
TITLE OF INVENTION: DNA Replication Templates Stabilized by
TITLE OF INVENTION: Quanine Quartets
NUMBER OF SEQUENCES: 23
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fulbright & Jaworski L.L.P.
STREET: 1301 McKinney, Suite 5100
CITY: Houston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 16, Application US/08838545
Patent No. 6646307
GENERAL INFORMATION:
APPLICANT: Shay, Jerry W.
APPLICANT: Wright, Woodring E.
APPLICANT: Piatyszek, Mieczyslaw A.
APPLICANT: Corey, David R.
APPLICANT: No. 6046307ton, James C.
APPLICANT: No. 6046307ton, James C.
TITLE OF INVENTION: Modulation of Mammalian Telomerase by TITLE OF INVENTION: Peptide Nucleic Acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Length 9;

No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence Seq

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 35, Application US/07982712
Sequence 35, Application US/07982712
Patent No. 5436391
GENERAL INFORMATION:
APPLICANT: Hideya FUJIMOTO, Kimiko ITOH
APPLICANT: MIKININO YAMAMOTO, and KO SHIMAMOTO
TITLE OF INVENTION: Insecticidal Protein-encoding Gene, Gramineous
TITLE OF SEQUENCES: 35
CORRESPONDENCE ADDRESS:
ADDRESSEE: Wenderoth, Lind & Ponack
STRRET: 805 Fifteenth Street, N.W., #700
                                                                                                                                                         Sequence 34, Application US/07982712

Sequence 6, Application US/09535851A

Batent No. 6528636
GRNERAL INFORMATION:
PAPLICANT: Battelle Memorial Institute
TITLE OF INVENTION:
Producing Fungus Rhizopus Oryzae and a Method of Expressing a Ger
TITLE OF INVENTION: in Fungal Species
FILE REFERENCE: E-1891B
CURRENT PAPLICATION NUMBER: US/09/535,851A
CURRENT FILING DATE: 2000-03-27
NUMBER OF SEQ ID NOS: 9
SOFTWARE: PatentIn version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 27989, Application US/09513999C

Sequence 27989, Application US/09513999C

Patent No. 6783961

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Dumas Milne Edwards, J.B.

TITLE OF INVENTION: Expressed Sequence Tags and Encoded Human Proteins.

Patent No. 6783961

Patent No. 6783961

PILE REPERENCE: 59.US2.REG

CURRENT APPLICATION NUMBER: US/09/513,999C

CURRENT FILING DATE: 1999-02-24

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       US-09-097-759-6

Sequence 6, Application US/09097759A

Sequence 5, 297263

Patent No. 597263

GENERAL INFORMATION:
APPLICANT: Winterhalter Mr., Walfred
TITLE OF INVENTION: Microorganisms and Processes for the Fermentative
TITLE OF INVENTION: Preparation of L-cysteine,
TITLE OF INVENTION: Levysteine, N-acetylserine or Thiazolidine Derivatives
FILE REFERENCE: Winterhalter
                                                                                                                                              GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nuclein acids and proteins of Drosophila melanogaster
TITLE OF INVENTION: Nuclein 2326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT APPLICATION NUMBER: 05/09/270,767
SOFTWARE: PATENT OF SEQ ID NOS: 62517
SOFTWARE: PATENT OF VEY. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              .;
